## U-STEP WALKER

### U-STEP WALKER

All the Features You Want in an Advanced Walker: The U-Step Walking Stabilizer!

U-STEP created to increase your independence. The secret is in our patented U-shaped base. Its ultra-stable foundation braces you in every direction.

It is not like pushing a typical walker. Instead, the U-Step surrounds you and moves with you. You will feel as stable as you would feel holding onto another person's arm.

The innovative braking system is easy to use and puts you in complete control. The U-Step will not roll unless you are ready to walk. When you lightly squeeze a hand brake, the unit will roll with you. Once you release the hand brake, the unit will stop immediately. This feature is particularly helpful when standing up from a chair because the unit will not roll away from you.

Overall Width:	23"
Seat Height:	22"
(Small Frame):	19"
